Appendix

Cadence Surgical Center Pre-Operative Scheduling Policy

Effective: January 1, 2026

Purpose

To establish standardized clinical requirements for determining patient readiness for surgical scheduling at Cadence Surgical Center.

Patient Clearance Status

Each patient must be assigned **exactly one** of the following pre-operative clearance statuses:

- **READY** – All required documentation, testing, and clinical criteria are complete and within defined timeframes.
- **NEEDS_FOLLOW_UP** – Required documentation, testing, or perioperative planning is missing, incomplete, or outside required timeframes.
- **NOT_CLEARED** – The patient has a safety condition that precludes proceeding with the surgery.

Rule 1: Required Documentation

The following documentation must be present prior to scheduling:

1. **History and Physical (H&P)**
    - Must be completed within **30 days** of the scheduled procedure date.
2. **Signed Surgical Consent**

If any required documentation is missing or outdated → **NEEDS_FOLLOW_UP**

Rule 2: Required Pre-Operative Testing by Procedure Risk Level

Each procedure must be categorized as **LOW**, **MODERATE**, or **HIGH** risk.

2.1 LOW or MODERATE Risk Procedures

- **Complete Blood Count (CBC)** within **30 days** of the procedure date.

2.2 HIGH Risk Procedures

- **Complete Blood Count (CBC)** within **14 days**
- **Comprehensive Metabolic Panel (CMP)** within **14 days**

Testing Review Standards

- Only the most recent result for each required test shall be considered.
- Results must fall within the specified timeframe relative to the procedure date.
- If any required test is missing or outside the permitted timeframe, classify the patient as **NEEDS_FOLLOW_UP**

Rule 3: Anticoagulation Management

For patients currently taking anticoagulant medication:

- A documented **perioperative anticoagulation management plan** is required prior to scheduling.
- The plan must clearly describe how the medication will be managed before and after the procedure.

If there is no documented plan, or the plan is incomplete or ambiguous, classify the patient as **NEEDS_FOLLOW_UP.**

Rule 4: Acute Safety Exclusion Criteria

The presence of any of the following conditions at the time of pre-operative review will result in **NOT_CLEARED** status:

- Systolic blood pressure ≥ 180 mmHg
- Diastolic blood pressure ≥ 110 mmHg
- Temperature > 100.4°F

Only the most recent result for each required test shall be considered.

Final Clearance Determination

A patient may be classified as **READY** only when:

- All required documentation is present and current
- All required testing is complete and within defined timeframes
- Anticoagulation management (if applicable) is clearly documented
- No acute safety exclusion criteria are present

If a required field needed to evaluate a rule is missing/unknown, the patient should be classified as **NEEDS_FOLLOW_UP**.
